

Safety, Easy operation

Strand Cooling Water Tub & Strand Air Blower

Two-point temperature adjustment
& Two Tank Types

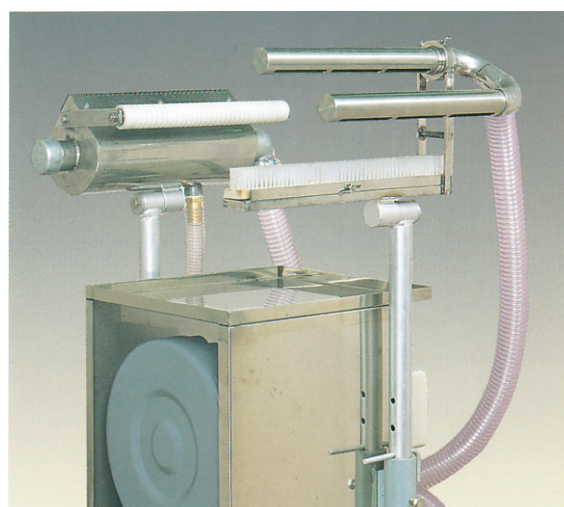

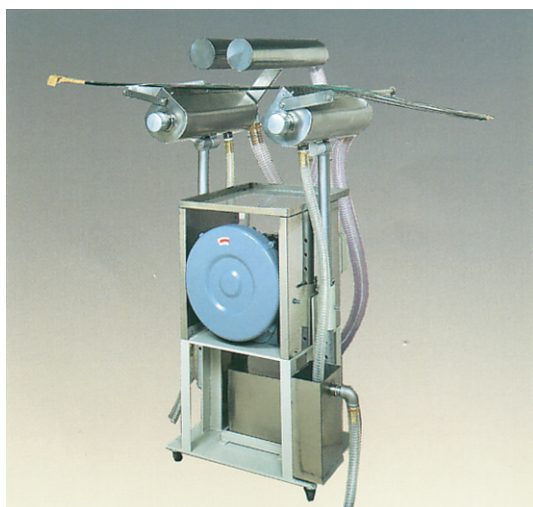

Strand Cooling Water Tub

In order to set up the optional cooling conditions, two tanks are equipped with the temperature controls which became independent respectively, and the cooling water temperature in a tank can be adjusted finely. The strand feed roller in a tank turns smoothly with bearing. The length, width, depth of a tank and the height of a mount and so on are manufactured according to an order.

Strand Air Blower (Industrial New Design Acquisition: No.2045608)

This equipment removes the moisture of strand which was pulled up from the cooling water tub. Although moisture is absorbed from the cap which has slits like the usual drainer. The feature is that blow an exhaust gas against strand directly. Besides the AB-ST type of a standard model, various manufactures are carried out by the appointed specification to form, capacity, etc. of a blower.
